Agent loops 5-16 iterations searching variations of the same concept

Create Evaluator | Copy Fix Context

▲ High | Agent Looping | Resolve | Ignore | Updated Apr 16 at 2:27 AM | View Agent Traces

The agent repeatedly searches documentation with variations of the same query across multiple model iterations instead of stopping after initial results. In the worst case, a single-word query ("KorriableMap") triggered 16 model iterations with 50 tool calls, consuming 827K tokens (4× the typical 20K). Root cause: contradictory system/prompt instructions and no recursion_limit enforced at the graph level.

>_ LangGraph config or graph invocation

PROPOSED FIX

```
config  = { "configurable" : {…}}
config  = { "configurable" : {…, "recursion_limit" : 34 }}
```
