

# Requesty

THE DEVELOPER'S GATEWAY TO SAFE AI

Confidential | 2025

# Thibault Jaigu

10+ years in Sales & Analytics

**Requesty**
Master AI coder

**Amplitude**
1st Employee in Europe
Scaled the business from 6m to 140m ARR
Closed 3 of the 1st +1m deals

**Opal**
Scaled Opal from Series A to Series B
8x in revenue

# Daniel Trugman

15+ years in Tech

**Requesty**
Outreach ninja

**Palo Alto Networks**
Tech and product lead for Cortex XDR on Linux

**TikTok**
Tech and product lead of Security R&D site in London

# Traditional AI setup

| Current State | Challenges |
| --- | --- |
| **Over 5 AI providers in active use** | **No unified governance/control:** Fragmented policies, inconsistent standards, no single management plane |
| **Hundreds of API keys distributed across teams, often still active post-departure** | **Security & compliance gaps:** No audit trail, lingering access, undetectable misuse, compliance risk |
| **$2M+ annual spend with no cost attribution by team/project** | **Limited visibility & cost control:** Cannot optimize usage, provider choice, or budgets |
| **Developers have no self-service access;** generic keys shared across tools | **Poor developer experience:** No visibility into consumption or rate limits, blocked on IT, zero autonomy |
| **1 in 5 requests fail with no automatic fallback** or load balancing | **Resilience risks:** Vulnerable to outages, quota exhaustion, and degraded service |

Business Impact

# ROI of Requesty

### Direct Cost savings
**$580k**

- Prompt caching (35%): 350k*
- Shadow AI Elimination (10%): 170k
- Audit Automation: 60k

### Developer Productivity
**$1.3M**

- 250 developers
- 1h saved per week
- $100/h

### Risk Mitigation
**$600k**

- 80% breach risk reduction
- Instant key revocation
- Full audit compliance

| Total Value | ROI Multiple | Payback period |
|---|---|---|
| $2.48M* | 16.5x | 3 weeks |

* Estimation on 1M AI spend a year
**Conservative prompt caching savings we've seen up to 57% of savings for customers

Solution

# Secure and scalable AI

Requesty

Step 4: Guardrails and Safety

Step 3: Observability & Cost Optimization

Step 2: Implement Basic Controls

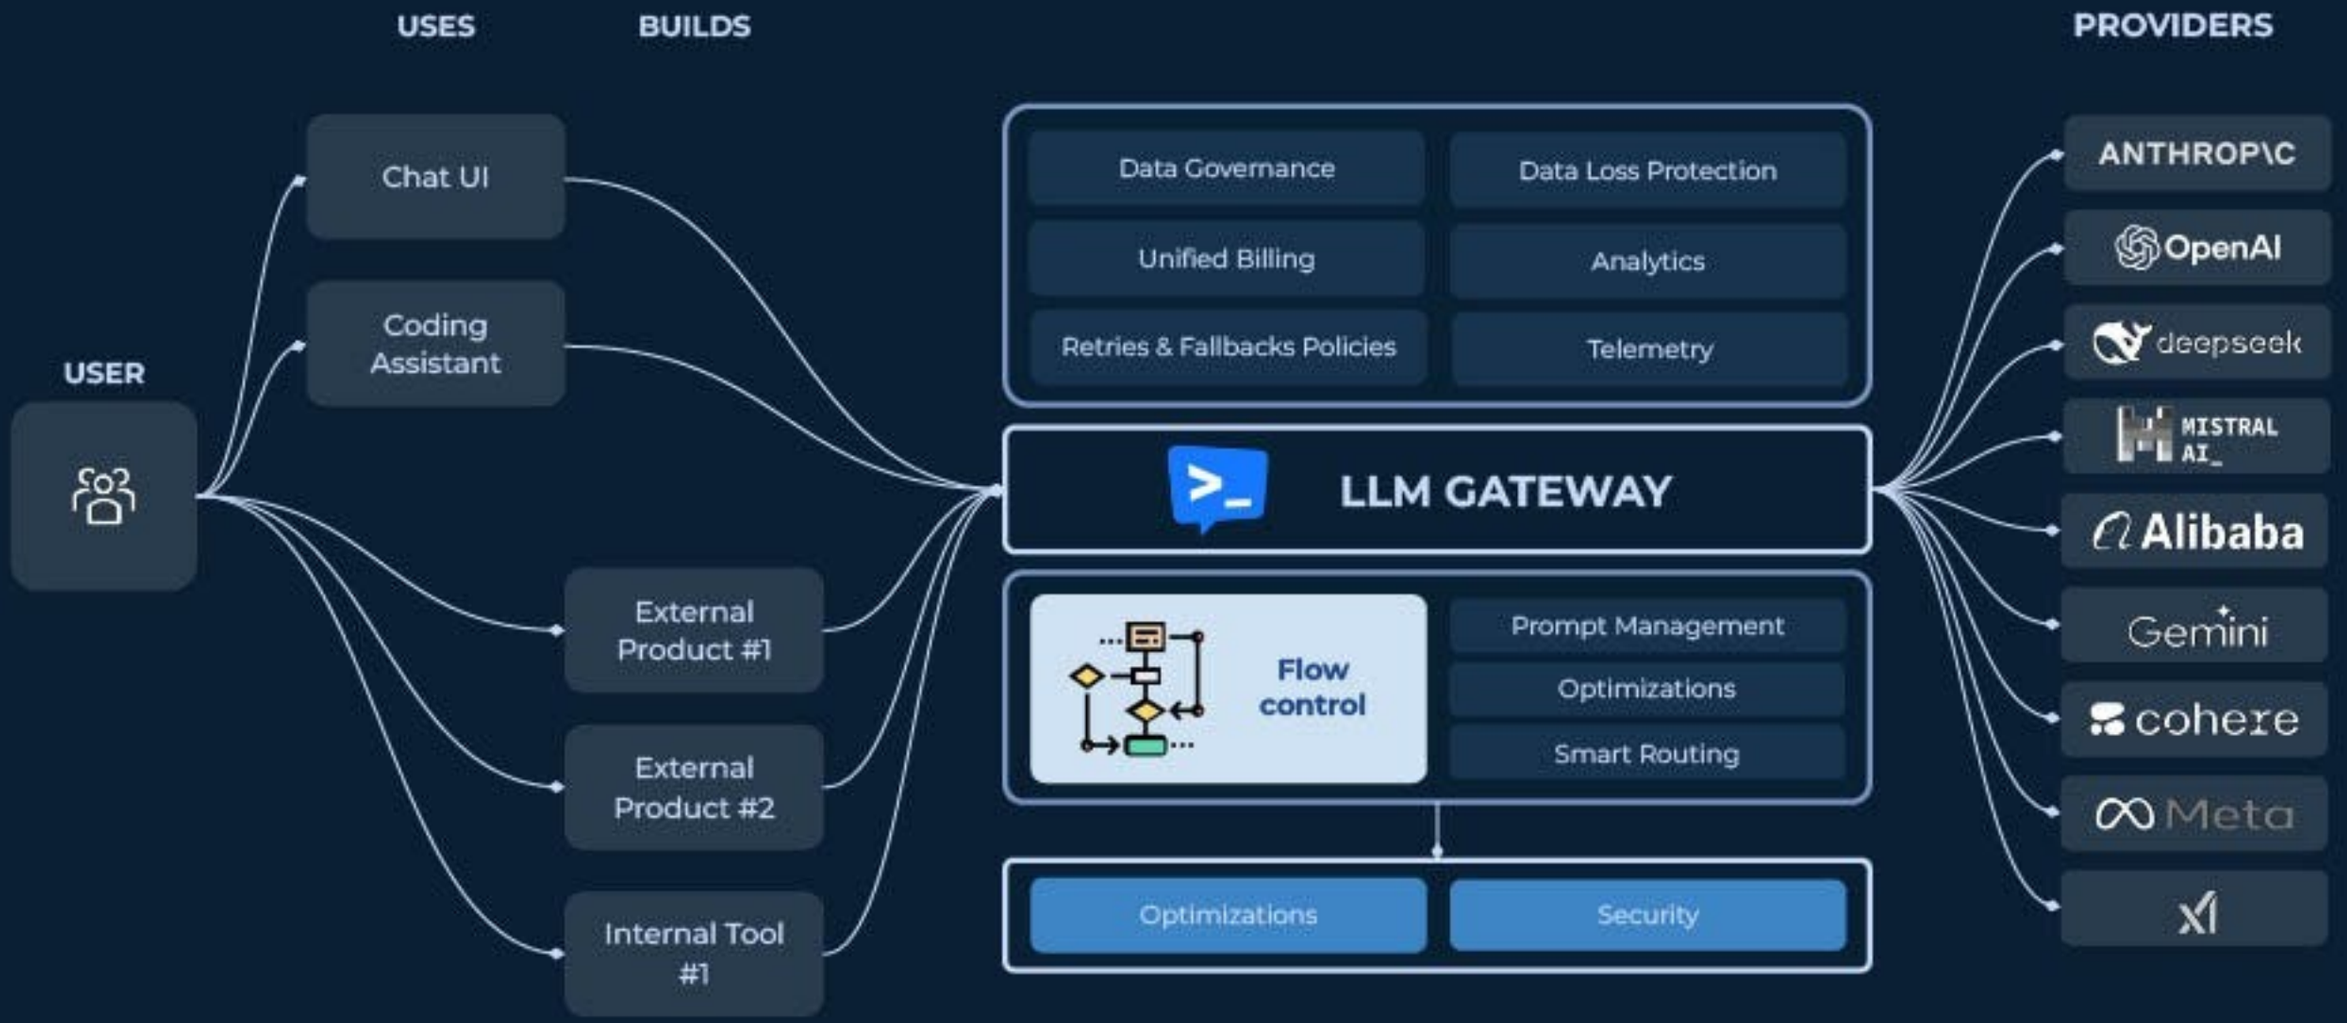

Step 1: Centralize Model Access

AI Agents | Coding Assistants | AI-Powered Apps | Internal Automation

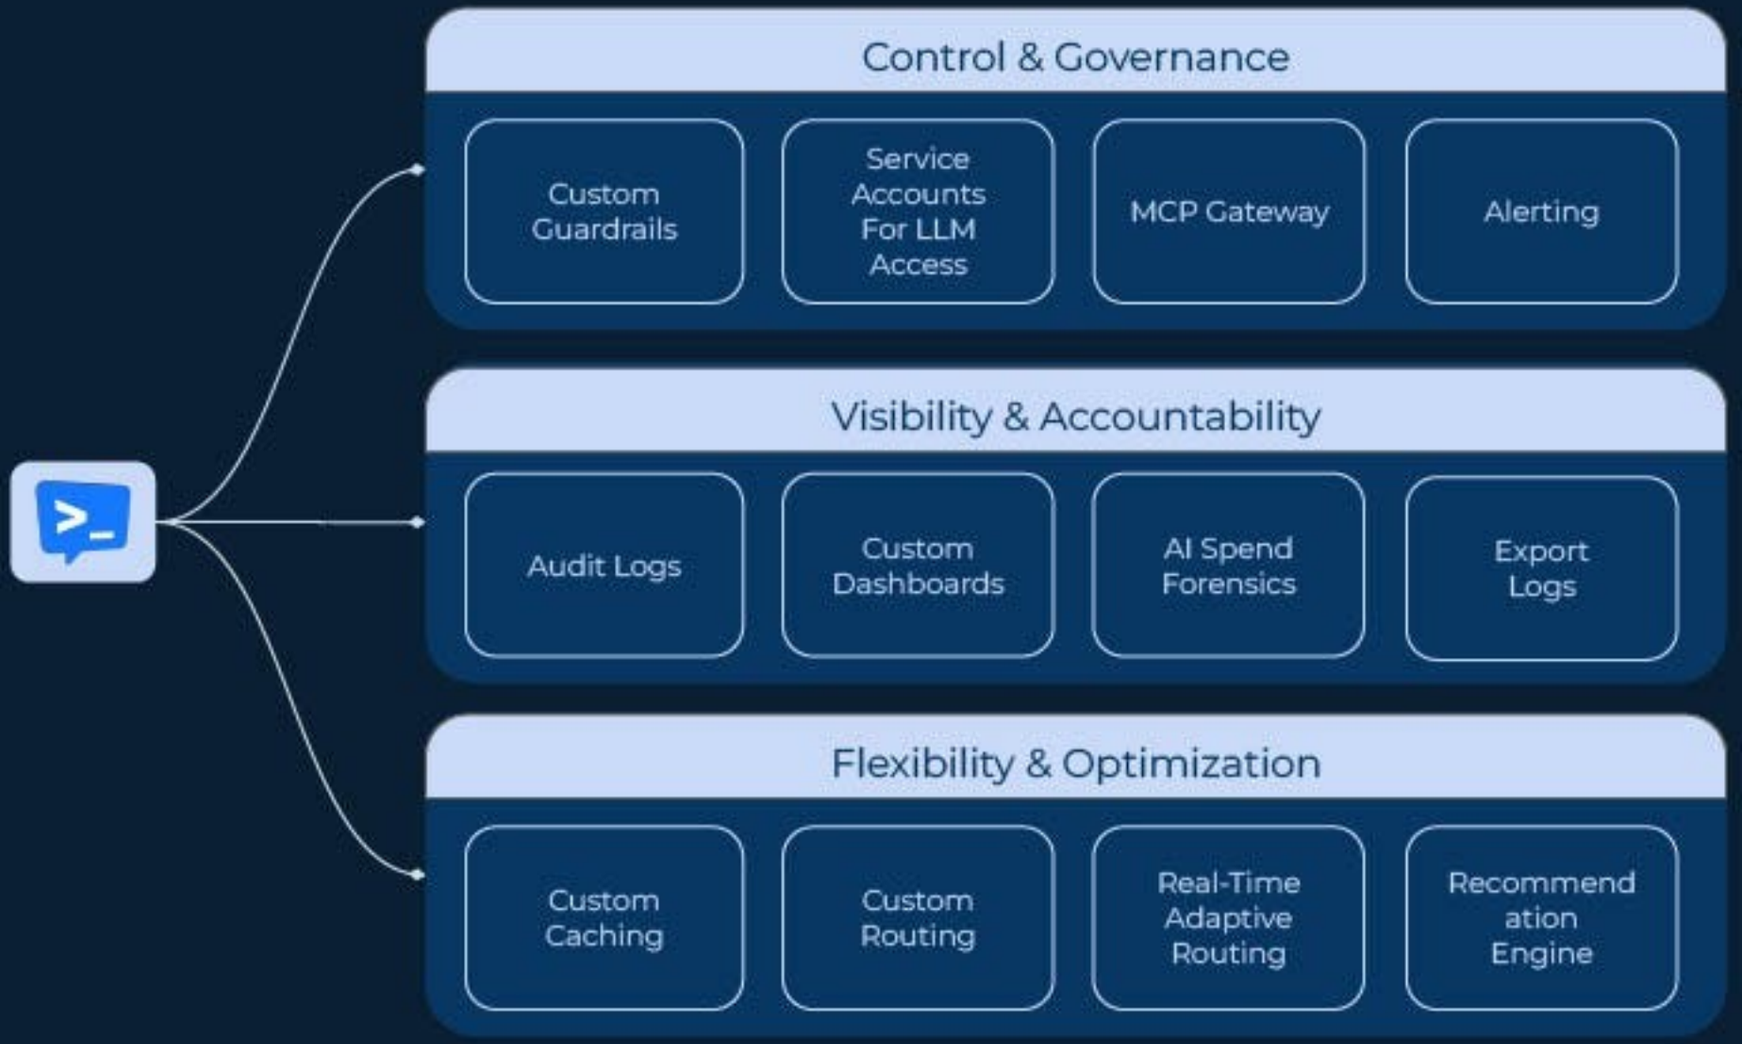

Chargebee, RAPID INNOVATION, appnovation, Nable, Capgemini, Demandbase, rezolve instant salesware, SIEMENS, sage, appear, Relevance AI

Solution

# A unified solution to route, scale, observe and optimize across every AI provider

# Roadmap: Expanding along three different axes

Confidential

# Feature Overview

| Feature | Challenges | Benefit for X |
|---|---|---|
| Control Plane / Governance | No unified governance across GCP (500+ projects), AWS, OpenAI | **Single control plane for all providers, enforce consistent security across + $1M spend** |
| Analytics: General | + $2M spend with no visibility by team/project | **Real-time cost attribution, 63% savings potential, budget alerts** |
| Advanced Analytics | Fragmented data, no Anthropic metrics, can't debug failures | **Visual heatmaps, custom dashboards, unified error tracking, ROI analysis** |
| Logs & Sessions | Developers blind to consumption, no tracking for AI tools | **Full API visibility, session reconstruction, debug independently** |
| Model Discovery | Can't compare performance across providers | **Data-driven model selection for specific use cases** |
| Auto Caching | No caching, paying full price for repeated requests | **63% automatic cost reduction, no code changes needed** |
| Routing Policies | No fallback when providers fail | **Auto-failover for 99.9% uptime, load balancing** |
| Prompt Library | No standardization across teams | **Centralized prompts, version control, shared best practices** |
| Security & Access | Manual key distribution, keys active after termination | **Auto-revocation, audit trail, detect unauthorized usage** |
