

A full-stack payment infrastructure for the crypto-enabled era

Ramp : crypto exchanges
PayPal : wire transfers

Problem & opportunity

Crypto-enabled products such as wallets, DeFi apps, and exchanges **are looking for ways to onboard the mainstream users.**

Today, they need to either focus on people who already own crypto or send users to external exchanges. A flow like this always hurts usability and conversion.

We estimate there's a 30B USD volume potential for crypto-enabled apps today and rapidly growing. This means a 300 million opportunity in gross profit and estimated 2B USD market 3 years from now.

Ramp's solution

Ramp solves that by providing an SKD that allows users to buy crypto right inside crypto-enabled products. Saving them the need to jump to another app.

An embeddable, full-stack solution solving all common issues.

- ✓ all compliance requirements
- ✓ AML and KYC
- ✓ liquidity
- ✓ fiat payments
- ✓ support

Ramp's solution

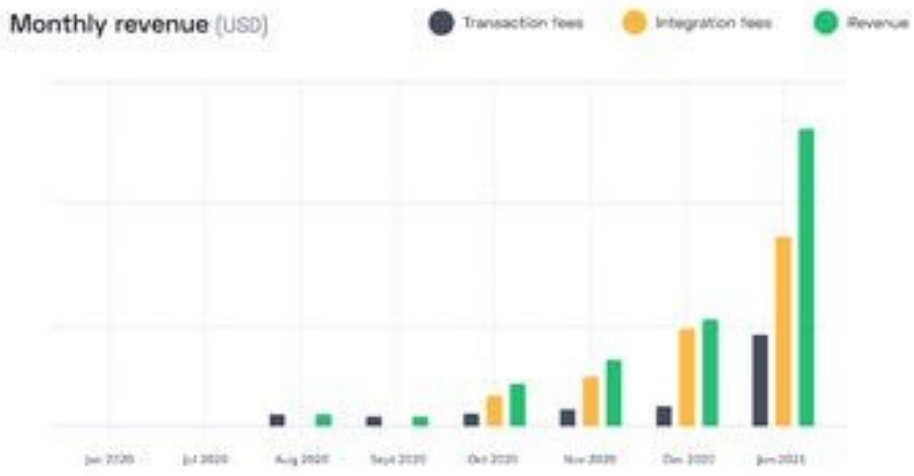

The solution we offer works worldwide already. We're **available in 170+ countries and territories including the EU and the US** (open beta).

Our simple solution helps crypto-enabled products reach the mainstream, globally.

Users who onboard to Ramp once can **use it across all products in which Ramp is integrated.** Ramp effectively is a digital wallet, built from the ground up for the world of digital assets.

Key metrics

We've been growing at a 50% monthly rate for 12 months now.

The underlying magic

We've achieved **incredible efficiency in fraud prevention, with just 0.015% transactions being fraudulent.** This is due to a sophisticated self-improving system for managing fraud. At the same time many of our users do not need to present their ID when first using Ramp, resulting in **market-leading 80%+ payment acceptance rate, 50% better than leading solution.**

Although popular, in most countries cards are not the preferred way to pay online. **Using local ways to pay across Europe slashed our processing costs there in half, increased the acceptance rate and reduced fraud, resulting in 4x better margins than cards.** This is now the go-to way to pay for crypto for 8 out of 10 people who have tried it.

The underlying magic

We are able to offer competitive rates and great experience by focusing on using data to reduce fraud and local payment methods to reduce costs and increase conversion. This way we aim to reach critical mass for virtuous cycles to kick in:

Network effect, platform-side

Once a user is registered with us, they can buy frictionlessly with all our partners. The more users we get, the better we are for our partners

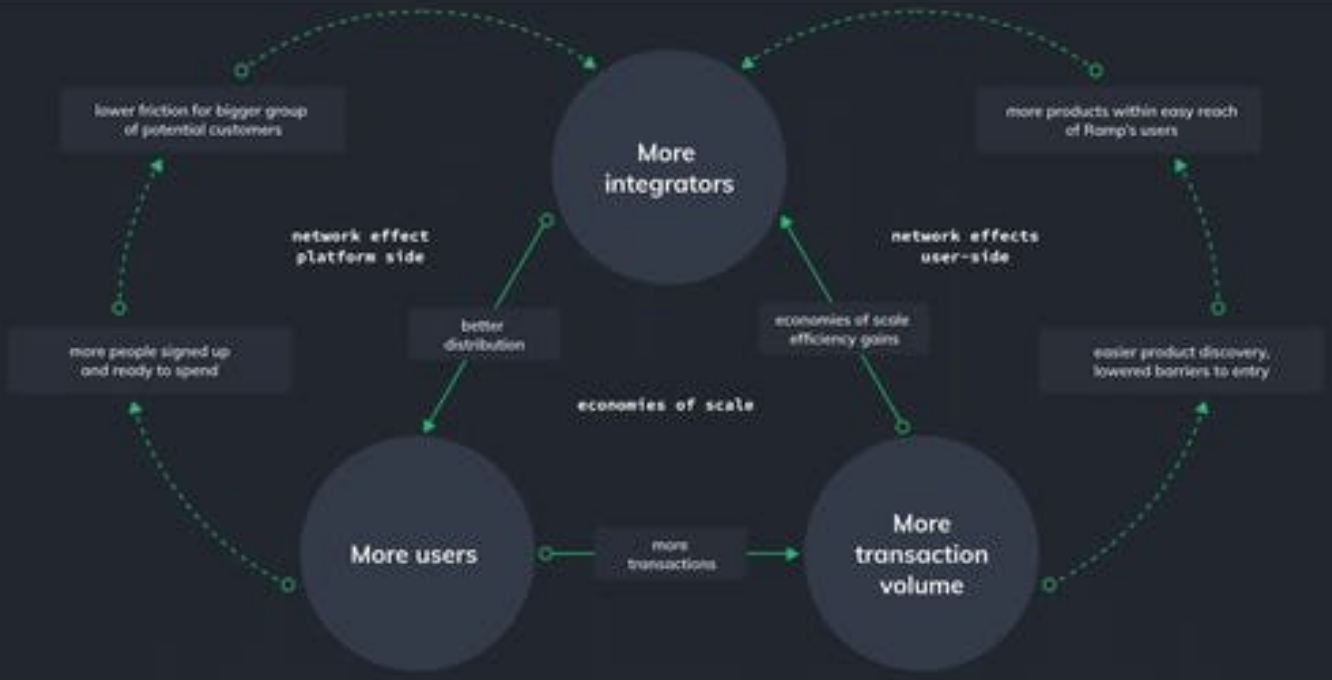

Economies of scale, efficiency gains from data

With more data comes increased efficiency. The more transaction data we get, the better we are at fighting fraud. More volume also means better pricing, as we're able to secure better deals with payment providers, a considerable part of the cost mix for on-ramping providers.

Network effect, user side

The more integrations Ramp has, the more attractive Ramp is for our users as a digital wallet, as they can seamlessly access more services.

SZYMON@RAMP.NETWORK

Business model

Ramp **charges end-users for transactions.**
We earn ~X% gross margin on our volume.

Ramp also **charges crypto protocols for adding their assets to our SDK** so that developers building apps on top of these protocols can add Ramp into their apps, *which in turn increases our revenues from transaction fees.*

SOME RECENT DEALS:

DEAL WITH MATIC

DEAL WITH POLKADOT TREASURY

DEAL WITH THE CELO FOUNDATION

Ramp is now profitable and increasing revenue from both revenue streams.

Go-to-market

We've begun with **DeFi and crypto games**, worked with Aave, Sorare, Zerion.

We are now working to expand our presence the **crypto wallet** category, working with Metamask, Opera, Fearless Wallet, Argent, blockchain.com.

We will soon be expanding to serve **crypto exchanges and fin-techs** - we're already in talks with many potential partners.

CEO

Szymon Sypniewicz
Background in law (NRF), entrepreneurship, economics

CTO, CPO

Przemek Kowalczyk
Background in physics (award-winning scientific research), ML, consulting (BCG)

TECH LEAD

Artur Kozak
Computer science, formerly with Google, experience in crypto start-ups

GENERAL COUNSEL

Katarzyna Sawicka
Legal, 10 years of experience in payments, crypto, and finance at international law firms

Investors: Seedcamp firstminute capital MAKER FABRIC VENTURES **Richard Burton** **Josh Buckley** **Julien Bouteloup**

More about the team here.

What's next?

We want to allow our users to
sell crypto for fiat money to close the loop
in their lifecycle (off-ramp).

We also aim to connect local payment methods
in some of our key jurisdictions including: **more open banking in the EU, ACH in the US, UPI in India, dLocal in LatAm.**

All this will drive the next 2 years of growth for Ramp.
Global reach and local focus is key here.

We're looking to raise

BUILD vs. BUY

WHY CRYPTO-ENABLED STARTUPS WON'T BUILD THEIR ON-RAMPS THEMSELVES?

1.
Regulations are a big barrier to entry.

2.
Fraud is hard to tackle without experience and data.

3.
Integrators want a global solution, but users need localised ways to pay; bridging this gap is difficult and costly.

4.
The expertise, capital expenditure and economies of scale make it a no-brainer for most companies to buy. We believe all crypto companies, including crypto exchanges, will want to outsource it.
